

Recent updates

DECEMBER 2018

Hello there!

We are very excited to inform you about the latest update to your diasend® service:

- Cloud-to-cloud connection between diasend® and the Dexcom G6 app [2](#)
- New compatible device with diasend® Transmitter [3](#)
- Questions? Please contact our support [3](#)

Please note!

This time, there is no need to update/restart your diasend® Transmitter. Both it, and diasend® Uploader, are automatically updated with the new device compatibility.

Cloud-to-cloud connection between diasend® and the Dexcom G6 app

The connection between diasend® and Dexcom G6 is done via cloud-to-cloud, meaning that users first need to connect their two accounts. Once completed, Dexcom data will be continuously synced with, and available in, diasend®. For instructions on how to set this up, or upload data from any compatible device – please refer to the Quick Guide for patients by clicking [here](#).

Please note:

Dexcom G6 is compatible with diasend® in all EU countries, as well as in Norway and Switzerland.

New compatible device – with diasend® Transmitter

Nipro 4SURE Smart

The Nipro 4SURE Smart BG meter is now compatible with diasend® Transmitter – which does not have to be manually updated or restarted. The new device is already compatible.

Questions?
